

## SofTrak-FM

Tracking software and hardware changes on a Network has always been a difficult and time consuming process, often requiring extra software to be installed across the whole network.

Due to the difficulties involved in this process, many companies do not perform these essential auditing processes, leaving themselves with the possibility of Software licensing issues, danger of introducing Viruses via illegal software downloaded from the internet, and even hardware being changed without their knowledge.

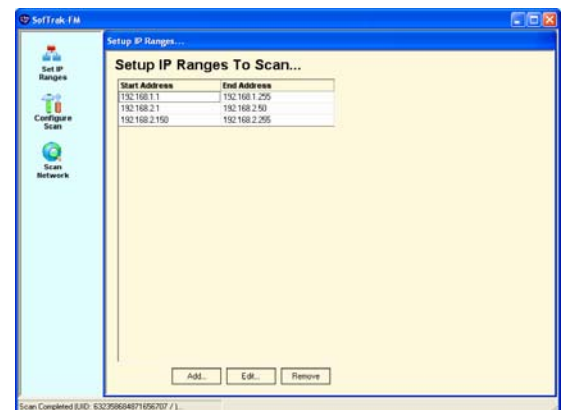

SofTrak-FM has been developed to solve this problem. Designed to be run from one central location on a network, there is no need to install client software or agents on the remote PC's in order to audit them\*.

Capable of collecting nearly 100 fields of information covering 27 areas of each PC, SofTrack-FM is one of the most comprehensive packages on the market for PC Auditing (and at a very competitive price).

Designed using the latest in software technologies SofTrak-FM boasts many features, for example:

- Fast and simple Installation with little configuration needed.
- No Client software or Agent required on client PC's\*.
- Scans are performed without the need for logon scripts, just make sure the PC's are switched on before starting the scan.
- Low network overhead - Ideal for operation over WAN's.
- Low processor overhead - Client PC's can be in full operation whilst a scan is performed.
- Full historical information is stored in a simple Microsoft Access database, allowing you to create custom reports.
- Information collected can be configured to suit your needs. Turn off the areas that you don't require to save time.

## SofTrak-FM is ideal for:

- Software Licensing - Ensure your company has adequate licences to cover the software that is installed.
- Software Control - Determine what software is installed on PC's that shouldn't be, or needs updating.
- Help Desks - Enable your helpdesk department to determine the exact hardware and software of the PC's they are supporting.
- System Upgrading - Effortlessly gather information on your entire network to determine any necessary hardware upgrades required.
- Asset Tracking - Make sure that your hardware remains your hardware - any changes can easily be seen and investigated further.

### System Requirements:

Client: Microsoft Windows 95\*, 98\*, ME, NT, 2000, 2003 or XP  
Network: TCP/IP  
Server: Microsoft Windows 2000,2003 or XP  
Database: Provided in Microsoft Access MDB format.

\*Windows 95 and 98 require additional Microsoft Software to enable remote scanning.

### The Cost

0 - 49	devices	£225 (equates to £4.60 per device)
50 - 99	devices	£425 (equates to £4.30 per device)
100 - 199	devices	£796 (equates to £4.00 per device)
200 - 499	devices	£1746 (equates to £3.50 per device)
500 - 999	devices	£2987 (equates to £2.99 per device)
Unlimited licence		£3000

Support -	By Telephone	1 working day response	£50 for 2 support calls
	By email	3 working day response	Free

(prices exclude VAT)
